

PERL PROCEDURE

Step 1

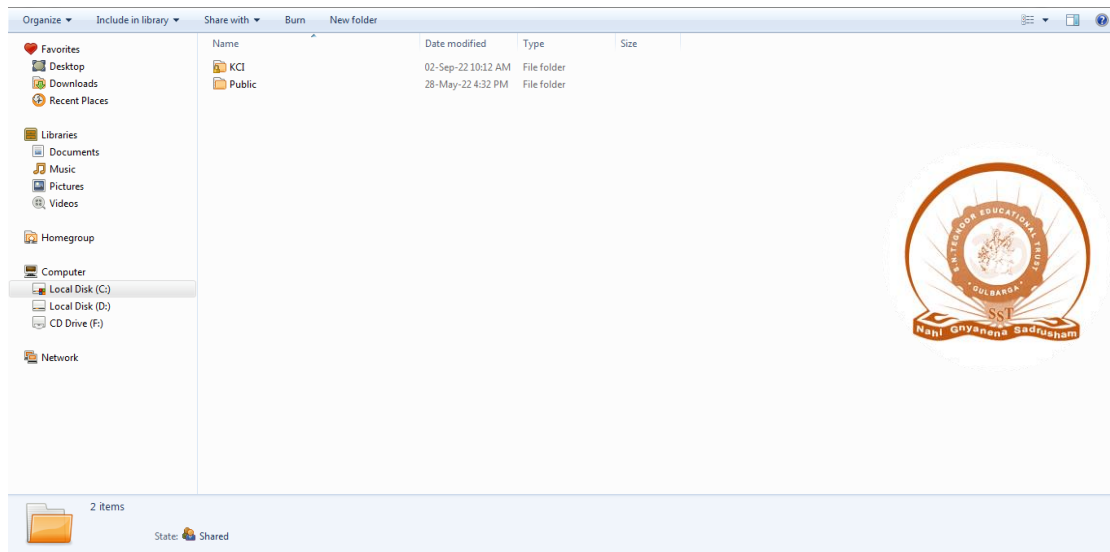

To run Perl program Strawberry-Perl software is required 32bit or 64bit depending on system Specification.

Step 2

To create a program write a program notepad or notepad++ and save as file (file name).pl In my documents.

Step 3

Now go to **C** drive then users

Now click on system name folder example (KCI) folder open it.

Now open my documents folder and copy the path from address bar C:\Users\KCI\Documents

Now open strawberry Perl cmd

Then type `cd C:\Users\KCI\Documents` paste the address that you have copied then enter

Now type the file name.pl (Hello.pl) then enter.

```
Perl (command line)
